YSU Secure Wireless Connect Guide
Android

Required Items: Android device

This guide will assist you with configuring your Android device for connection to the ‘ysuwireless’ network. The setup instructions will be set up in steps. Please be sure to complete all of the setting changes in each step before moving on to the next.

Please Note: When connecting any device to the ‘ysuwireless’ network, it is strongly recommended that the following security precautions be taken to protect your data and ensure maximum compatibility:

- Make sure that any updates for the operating system as well as any software updates on the device are installed
- Set a screen lock passcode or password on your device
- If the device runs a security and/or antivirus suite, make sure that only one suite is installed and that it is current with the latest definitions

Step 1: Tap on the All apps button

Note: The button may be an upward-pointing arrow, keypad grid, or other shape on some devices.
Step 2: Tap Settings

Step 3: Tap Wi-Fi

Note: This setting may be called Wireless & networks on some devices.
Step 4: Verify that Wi-Fi is On (usually via a slider or checkbox) and verify that ‘attwifi’ is not in the “Connected” or “Saved” state – if the ‘attwifi’ network is in one of these states, long-tap on it to forget the network.

Note: Your device may have an additional Wi-Fi settings menu that needs to be accessed to set up wireless networks.

Step 5: Tap the ysuwireless network to bring up the connection settings for it
Step 6: Enter the following settings for the ysuwireless network:

EAP method: PEAP
Phase 2 authentication: MSCHAPv2
CA certificate: (unspecified) or None
User certificate: (unspecified) or None
Identity: Your YSU username
Anonymous identity: Leave this blank
Password: Your YSU password

Click Connect after all of the above settings are correct.

Step 7: Verify connectivity

After a few seconds, the ysuwireless network should be “Connected” and the set up is complete.
